

Digital Games to Learn

GAME-BASED LEARNING

What is Game-Based Learning?

Game-based learning is a way to enhance your instruction with the use of technology in the classroom. Game-based learning can increase motivation for students learning and practice new skills learned.

The Impact:

GBL impacts learning in many ways. Using technology in learning can create many ways for students to learn. Using games as a strategy for students learning will highly motivate them to play and learn at the same time.

Benefits for Teachers

- Assessment included in game results
- Can achieve learning goals
- Creates an exciting learning environment
- Track students knowledge

Benefits for Students

- Increased motivation for learning
- Increased engagement
- More practice for skills
- Encourages critical thinking skills

Examples of Digital Games

Why should you focus on digital game based learning?

Game-based learning is a small step into enhancing your teaching with technology.

By including GBL learning in your instruction it can put you on the right track to use technology in the classroom without being overly expensive. Finding the right games can help enhance learning methods and teaching tools to help students and teachers.

Using games is shown to increase motivation across students learning which is great in order to grow the love of learning with technology!
